Brief

Create a portfolio website which presents you as a **dev** and IT professional. The purpose is to provide an online portfolio that provides information about you, your skills, interests, professional knowledge and a showcase of your work.

Design Approach

- Mood Board
- Wireframes
- Started with Navigation and Footer as bookends for page
- Layout for portfolio using grid and flex component
- Layout for blog with collapsible text and gallery
- Contact via form
- About using parallax for personal images to have ‘journey feel’
- Homepage with central image to tie together aesthetic and then styled with colour swatches

Wireframes

The image displays a grid of wireframe prototypes for a personal website, organized into five main sections: Header, Footer, Contact, Blog, About, and Portfolio.

- Header:** A simple wireframe showing a black header bar at the top and a light gray footer bar at the bottom.
- Contact:** A wireframe for a contact page featuring a form with fields for name, email, and message, along with a "Send" button.
- Blog:** A wireframe for a blog section. It includes a header with the author's name, a welcome message, and a red star icon labeled "link to post". Below this are two blog post templates, each with a date ("03 Mar") and a note about hidden text appearing on click.
- About:** A wireframe for an "About" page. It features the author's name, a title ("About Intro"), and a section titled "Bad or perspectives under animals" with three circular icons.
- Portfolio:** A wireframe for a portfolio section. It shows a header with the author's name and a "Portfolio" link, followed by a list of projects: "Bad or perspectives" (with a note about faded image on no-hover), "Lessons done" (with a note about bright color on hover), and "Name evan ipsam" (with a note about date moving on image).

Annotations provide specific details about certain design elements:

- A blue diamond icon next to the "Header" prototype is labeled "Header".
- A blue diamond icon next to the "Footer" prototype is labeled "Footer".
- A red star icon next to the "Blog" prototype is labeled "link to post".
- A red star icon next to the "About" prototype is labeled "Dream animations: faded image no hover, bright color hover, date moves on image".
- A red star icon next to the "Portfolio" prototype is labeled "animate font".

Stayed true:

- Blog
- Contact
- Portfolio

Style Choices

- Inspiration was from vector illustration
- Bold but minimal
- Art Deco colours and some components – logo, icons, black and white images
- Colour theory: Yellow – positivity, Blue - dependable
- Colour palette works well for colour-blind accessibility
- Navigation bar in predictable spot for ease of access
- Had to be disciplined with patterns and images for copyright and clarity

Branch: Pink Aesthetic

The map indicates you can go through the mountain but there are rumours of a strange species that have been lurking in the forest that have come from Mt. Escendo.

You could go around but this may take longer and the rocky path is narrow and treacherous. (Use ↑/↓ arrow keys, press Enter to select)

CASSANDER ZARA.

I'm glad you're here.

Come inside and learn a bit about me and what I can do.

I grew up in a small country town in Victoria, in the Mallee, near the border with South Australia. As a child of farmers I spent my days running through grapevines, riding horses, reading books, reading and dancing.

I finished school in Mildura, Victoria and moved to Melbourne to complete a Bachelor of Science at the University of Melbourne majoring in Microbiology, Immunology and Infectious Disease & Immunology. I completed a

GOOGLE REVEALS JUST HOW MUCH OF THE WORLD IT'S MAPPED WITH STREET VIEW AND EARTH.

Read more.

HOW MUCH OF THE WORLD IT'S MAPPED WITH STREET VIEW AND EARTH.

Google has photographed a huge amount of the planet for its Street View and Google Earth projects. But for the first time, Google has revealed how much it has photographed: 10 million miles of Street View imagery and 36 million square miles of Google Earth imagery, according to a report from CNET. That's particularly impressive: Google says that it now covers 98 percent of the places in the world where people live. And the 10 million miles of Street View imagery is ahead of competitors like Apple, which has just started to include similar street-level photography in Apple Maps with the release of iOS 13. There's still a long way to go before it catches up to Google's millions of miles. The scope of Google's efforts to catalog the entire world neatly in its apps and services. Even if Street View or Google Earth's satellite images are
